

CHLORINE STABILIZER

- Against the disappearance of chlorine, to be used with non-stabilized chlorine.
- Economizes from 40-60% of chlorine usage in case of treatment with inorganic chlorine (chlorine gas, sodium hypochlorite or calcium hypochlorite)

Instructions:

100g/10m³ of water for a reading of 10mg/l, in the skimmer in absence of any other product, the ideal value of stabilizer is inferior to 75mg/l.
