

### 15- MOVABLE BULKHEAD

- The Movable Bulkhead sets the international standard for Bulkhead pool configuration and programmability.
- A high-precision corrosion resistant bulkhead that successfully meets all international regulations and requirements that has positive appeal to the swimming community.
- Bulkhead motorisation began in 1985 and is still in operation, with our latest design leading the world in reliability and efficient operation.

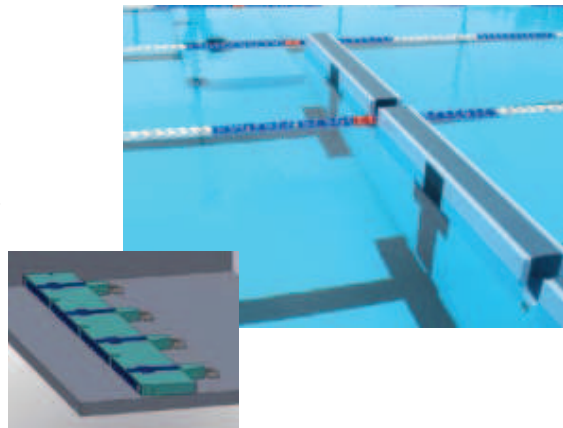

To order please enquire and supply dimensional information.

### 16- SUBMERSIBLE SWIMWALL

- The Submersible Swimwall is locked flat on the pool floor when not in use and can be raised in moments when required by introducing compressed air using supplied airlines into the bulkhead. The bulkhead is then locked into the upright position against the pool side.
- The ability to span either half or all of the pool means even greater flexibility for pool programming.
- The Submersible Swimwall is produced from FRP with internal buoyancy to permit manual operation using supplied air lines. Vertical walls of the bulkhead are supplied with target markings in accordance with Fina regulations.
- Provision is made for lane ropes to pass through the bulkhead as required, and for the connection of lanes to the Swimwall.

To order please enquire.

### 17- MOVABLE FLOORS

- A range of movable floor systems (manual and motorized), which meet the requirements of pools of every size from the small hydro-therapy pool to the major international pools.
- All materials are corrosion resistant. Around 90% of the fabric of the floor is advanced composite plastic.
- All stainless steel used for fittings and fastenings is 316 marine grade.
- Floors may be operated by cable or scissor mechanism, and may be installed in existing or new pools.

To order please enquire.
